

```
1  /* Project to measure flicker fusion threshold using
2  teensy 3.2 microcontroller.
3  The requirements of the project are:
4  A flashing LED should serve as the visual stimulus.
5  A potentiometer should be used to adjust the LED blink
6  frequency.
7  A button should be connected which when pressed a hardware
8  interrupt is to be triggered and the currently set blink
9  frequency should be displayed.
10 No delay() function to be used and
11 Debouncing of the button to be done*/
12 #include <Arduino.h>
